

New for 2016

Get Hanby Certified

The Hanby certification course will include a lecture with power point presentation that provides the science behind the Hanby TPH Water and Soil Field Test Kits in an easy to understand format so the Student understands the “*what,*” “*how,*” “*why,*” “*where*” and “*when*” answers relating to sample analysis.

The course format has three parts; lecture, Instructor demonstrations and Student demonstrations. After the lecture portion of the course, the student will observe Instructor performed demonstrations of the kits. The final portion of the course is the Student performance of sample analysis and demonstrating not only the proper steps in the analysis process, but obtaining the correct result readings.

After the completion of the course the Student will have earned the designation of **H.E.C.P.** being a ***Hanby Environmental Certified Professional.***

Being Hanby certified provides stronger credibility of the work performed by the Person utilizing the Hanby Water and/or Soil TPH Field Test Kits.

Hanby is willing to provide certification courses to groups of five students or more. Classes are being formed, so you can inquire about the next course available in your area or if you have a group of at least five students, Hanby will create a special date for your group.

The cost per student is the same cost as a Hanby TPH Field Test Kit at \$1,295 per Student.
